Let's Start!

It's something I will be using every day!

Learning Outcome

Exchange information about unlikely events or fairly certain conditions that will be fulfilled in present, past or future in spoken or written texts and in work and social contexts.

Can Do Statements

- I can talk about technology and gadgets.
- I can talk about future events using if.
- I can talk about two actions together.

Ask your partner:

- How do you think household appliances can make a better future?
- If you could have any new appliance invented for you, what would it be? Why?

Let's Explore!

We'll need a holographic TV if we're going to **keep up***

* When we "keep up" we make sure we have things that other people have.

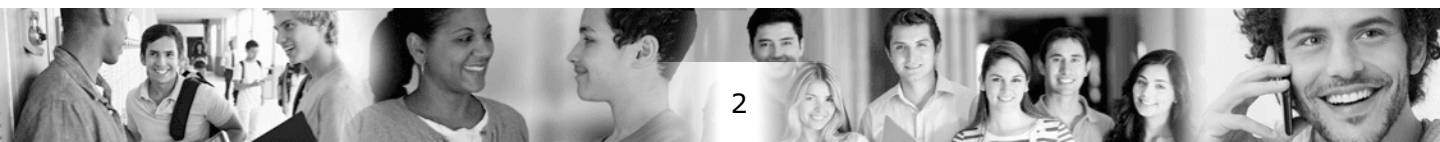

Instructions: Read the text aloud.

If you're going to move into the future with your home appliances, soon you'll have a lot of ultramodern gadgets to choose from. I don't mind waiting for new innovations, do you? If you wait for that new stove, you'll be able to change the way you cook altogether with heatless cooking. Stores in the U.S. are anticipating getting this technology soon. If you are wondering what it is, you'll be finding out right here.

Consider cooking on a stove with electromagnetic currents in the burners that make the metal pots and pans hot. If you use an induction cooktop, just the pot you are using and what's inside will heat up. Imagine taking a pan off the stovetop and then being able to put your hand on the cool glass surface. Choose an induction stove if you want the heat to be generated from the pan rather than from the stovetop.

We'll need a holographic TV if we're going to keep up. A new company is proposing finding ways to refresh holographic images faster. With this you will enjoy seeing things move and look as they should. If we're going to have holographic TVs for the consumer market, the new, quick refresh rates will have to work and keep working. Keep looking for them at a store near you!

We are also recommending waiting for the hero of the century, the waterless washing machine. Get one of these if you want to save on water! Xeros reports their machines using 90% less water than other conventional machines. If you're going to do that, you need to clean using their nylon polymer beads. These beads are more absorbent than water, allowing them to absorb stains right into their core.

Let's Practice!

Can you talk about technology and gadgets in the kitchen?

Instructions: Make a line to match the word and its definition.

COLUMN A

1. Heatless
2. Burner
3. Induction
4. Electromagnetic
5. Holographic

COLUMN B

- a. projecting 3D images created by light beams
- b. without generating heat
- c. of or relating to the interrelation of electric currents or fields and magnetic fields
- d. heating an object without electricity
- e. part of stove which produces heat for cooking

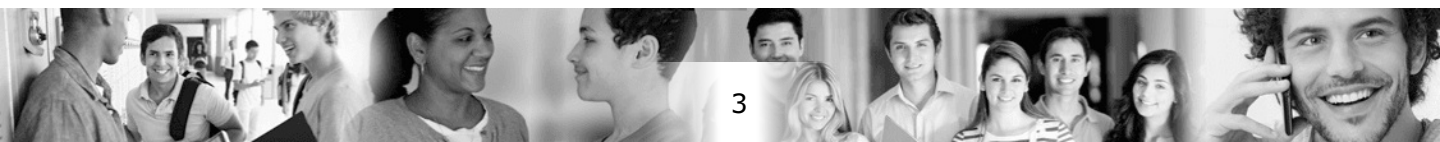

Let's Practice!

Do you have any plans for the future?

Instructions: Write down the phrases to complete the sentences. Use capital letters where necessary.

Use: going to keep up / you'll have / wait for that new / to do that / you'll be able / you want to / if you're going

1. _____ to move into the future with your home appliances, soon _____ a lot of ultramodern gadgets to choose from.
2. If you _____ stove, _____ to change the way you cook altogether soon with heatless cooking.
3. We'll need a holographic TV if we're _____.
4. If you're going _____, you need to clean using their nylon polymer beads.
5. Get one of these if _____ save on water!

Extension Activity

Design a new appliance for the future.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Decide on a new appliance that people will want to use.
- Sketch out a basic drawing or use a picture that's of something similar and annotate it with the innovations and how they are used.
- Talk about using this item in the future with "if".
- Present your appliance to a partner or group.
- Listen to other presentations
- Discuss the advantages of such items together.

Self-Assessment

Yes

No

I decide on a new appliance that people will want to use.

☐ ☐

I annotate an image of the item.

☐ ☐

I talk about the item using real conditionals and verbs followed by gerunds.

☐ ☐

I discuss items with a partner or group.

☐ ☐

Target Words

- ultramodern** (adjective): most recently developed and put on the market
e.g. If you're going to move into the future with your home appliances, soon you'll have a lot of ultramodern gadgets to choose from.
- innovation** (noun): a new idea or method
e.g. I don't mind waiting for new innovations, do you?
- to anticipate** (verb): to imagine or expect something to happen
e.g. Stores in the U.S. are anticipating getting this technology soon.
- heatless** (adjective): without generating heat
e.g. If you wait for that new stove, you'll be able to change the way you cook altogether soon with heatless cooking.
- electromagnetic** (adjective): the interrelation of electricity and a magnetic field
e.g. Consider cooking on a stove with electromagnetic currents in the burners that make the metal pots and pans hot.
- induction** (noun): heating and object without electricity
e.g. If you use an induction cooktop, just the pot you are cooking with and what's inside it gets hot.
- burner** (noun): part of stove which produces heat for cooking
e.g. Imagine removing a pan from the burner it's no longer hot.
- holographic** (adjective): projecting 3D images created by light beams
e.g. If we're going to have holographic TVs for the consumer market, the new, quick refresh rates will have to work and keep working. Keep looking for them at a store near you!
- waterless** (adjective): without the use of water
e.g. We are also recommending waiting for the hero of the century, the waterless washing machine.
- absorbent** (adjective): able to take in liquids
e.g. These beads are more absorbent than water, allowing them to absorb stains right into their core.

Learning Points

The Real Conditional: Talking About The Future

You can use the Real *Conditional* with *If* clauses to talk about future situations and outcomes.

You use the Real Conditional to say it's possible that you will or will not do something. In that condition, something else may, may not, will, or will not happen.

The parts of the sentence are divided into two clauses: the *If* clause and the *Condition* clause.

Structure:

If + Present Simple/Present continuous ... will/Present Continuous / be going to

Example:

We'll need a holographic TV if we're going to keep up.

You can use an Imperative verb in the main clause if you are making offers, giving instructions, or suggesting advice.

Example:

Get one of these if you want to save water.

Examples:

- *If you're going to move into the future with your home appliances, soon you'll have a lot of ultramodern gadgets to choose from.*
- *If you wait for that new stove, you'll be able to change the way you cook all together soon with heatless cooking.*
- *If you are wondering what it is, you'll be finding out right here.*
- *If you use an induction cooktop, just the pot you are using and what's inside will heat up.*
- *Choose an induction stove if you want the heat to be generated on the pan rather than from the stovetop.*

Learning Points

Verbs Followed by -ing

When you talk about two actions linked together, you normally use two verbs. The first verb follows the rules of conjugation for the sentence, while the second verb can be a verb in the -ing form.

You can use two verbs to talk about two connected actions. The main verb introduces the main action, and the second verb in the -ing form gives more information about that action.

Some verbs followed by -ing are *imagine, enjoy, consider, mind, keep, love/hate* .

Structure:

Subject + first verb + -ing form of the second verb

Look at some examples from the text:

Examples:

- *I don't mind waiting for new innovations, do you?*
- *Stores in the U.S. are anticipating getting this technology soon.*
- *Consider cooking on a stove with electromagnetic currents in the burners that make the metal pots and pans hot.*
- *Imagine taking a pan off the stovetop and then being able to put your hand on the cool glass surface.*
- *A new company is proposing finding ways to refresh holographic images faster.*
- *With this you will enjoy seeing things move and look as they should.*
- *Keep looking for them at a store near you!*
